

"Classic Reverb"

Old School Amps™

— 38W Musical Instrument Amplifier —

Product Overview:

- Classic Amplifier design incorporating 2 6L6-GE power tubes in push-pull, cathode follower tone circuitry and integrated Reverb.
- Versatile Design optimized for Guitar Players, but equally capable as a Bass Amp.
- Class AB1—38W RMS Clean Power @ 8 Ohms.
- EL34 Option is available.
- Low-Noise circuitry using hand-crafted Garolite Eyelet Board and Point to Point wiring, w/Std 3 prong 120VAC power.
- Quality US-made capacitors.
- Solid construction featuring a steel chassis and Laser-Etched front and rear panels.
- Heavy duty power and output transformers.
- Two speaker outs and impedance selector.
- Line-out jack and Level Control allows use of a Direct Box to interface with PA.

The Input Section: The Classic Reverb Instrument Amplifier has high and low inputs and a gain control allowing flexible use for either guitar or bass instruments. It also utilizes a cathode follower driven tone section with Bass, Mid and Treble Controls. This is followed by a Master Volume control to set the overall level of the amplifier.

The Power Amp: The Classic Reverb has a matched phase inverter tube that drives a matched pair of Groove Tubes 6L6-GE power tubes. Alternatively, you can have the amp optimized for guitar use with Winged C EL34 power tubes. Either tubes exhibit a very smooth transparent sound in the Classic Reverb!

Application Notes: I designed the Classic Reverb to be an amplifier that is at home both as a Guitar Amp and a Bass Amp. It is truly a great sounding Guitar Amp with classic tone, and also a warm sounding Bass amp with great tone and punch. It has virtually no hum and hiss making it a great choice for Studio Work.

For Guitar Amp use, combine it with a 1-12" open back cabinet, or in a 2-10" or 4-10" configuration.

For Bass Amp use, combine it with our 115-HO Bass cab for a "High Output" punchy Bass Amp for stage use.
