

# Model One Bass

*Old School Amps*™

## 20w "Class A" Bass Guitar Ampfier

### Product Overview:

- All tube single-ended "Class A" with adjustable Fixed Bias KT88 Power Amp.
- 20W RMS of Clean Power @ 8 Ohms.
- Low-Noise circuitry using hand-crafted Garolite Eyelet Board and Point to Point wiring, w/Std 3 prong 120VAC power.
- Quality All US-made capacitors.
- Solid construction featuring a steel chassis and Laser-Etched front and rear panels.
- Heavy duty power transformer and air-gapped output transformer for great tone and sustain.
- Front Panel: High/Low Inputs, Input matching Gain Control, Bass, Mid, Treble and Master Volume.
- Rear Panel: Line Out Jack and Level Control. Fuse and 6' Detachable Power Cord.

**The Input Section** - The Model One Bass Amp features special input sensitivity circuit that allows you to optimize the amp for both passive and active Bass Guitar pickups. It can optionally be set up for acoustic pickups for guitar and stand-up bass use. Adjusting the "Gain" control allows you to maximize the clean output of the power amp. This is not just a practice amp!

**Applications:** I designed the Model One Bass amplifier to be used as a warm sounding portable amp with great tone. It has virtually no hum and hiss making it a great choice for Studio Work. Although 20 watts doesn't sound like much power, it is loud enough with an efficient bass speaker cabinet, to be used standalone for rehearsals and small gigs. While designed for bass guitar, its flexible design also makes the Model One Bass a robust Class A guitar amplifier with excellent full range sound! Excellent as a modeling power amplifier, it also accepts pedals very well.

**Special Line Out Feature** - Most manufacturers take a signal tap from the preamp circuitry and label it as "Line Out". The Model One Bass amps "Line Out" function is taken from the speaker output ensuring that the warm sound of the Class A Power Amplifier can be sent to the recording console or house mix, when used with a standard direct box. The Level Control allows you tailor the signal level that is sent to the PA, bass rig or recording console. By using this feature, you can use the Model One Bass and a speaker cabinet as a "Stage Monitor", while the PA or house system provides the main bass amplification for larger venues.

I personally build and test every Model One Bass amplifier using the best materials, solid construction and innovative tube circuitry. I think you will enjoy this very unique Bass Amplifier with its great tone and light weight. Dale Murrow; Old School Amps

### Model One 20W "Class A" Bass Amplifier Head

Clean Power Output 20W RMS @ 8 Ohms.

*Call for Price*

The amplifier comes mounted in a solid Birch Plywood Cabinet w/Black Tolex finish and metal grill. It comes with a full 5 year warranty. The tubes are guaranteed for 1 year.

Dimensions: 10H x 7D x 15W; 18lbs
